AMENDMENTS

IN THE SPECIFICATION

Please delete (57) Abstract from the first page of Applicants' specification and add this

Abstract to page 19 of Applicants Specification:

ABSTRACT

The invention is a method and a system, which allows the integration of email-enabled

devices into a carrier service network without the need for user individual configuration of the

devices. A system with an email proxy and a database is provided for handling email requests

from a terminal. The network address of the terminal is used to retrieve email configuration

settings from the database, whereupon the email proxy is able to communicate with an email

server using the retrieved email configuration settings.
